INTRODUCTION

Purpose of the Report:

The *1990 Census Information Analysis* report is a compilation and brief summary of some of the initial data gathered from the 1990 U.S. Census of Population and Housing. The report is intended as a reference source for the RTA Board of Directors and for RTA Planning and Development staff.

Data Description:

There are two early products from the 1990 U.S. Census process: Public Law (PL) 94-171 Counts and Summary Tape File (STF) 1. The PL 94-171 Counts, or the redistricting data file, contains counts that were designed specifically for use in legislative redistricting. The redistricting data file provides data on population, race groups, persons of Hispanic origin, population 18 years and older, and housing units. STF 1 contains 100 percent of the population and housing unit data, including all information from the short form of the 1990 U.S. Census questionnaire. Additional products will be released over the next few years.

Description of the RTA Report:

The following 1990 U.S. Census information is contained in this report:

Population

- Population
- Families
- Family Size
- Households
- Household Size
- Sex
- Age
- Race

Housing

- Housing Units
- Occupancy Status
- Vacancy Status
- Median Value
- Contract Rent
- Units in Structure

Where appropriate, a comparison of 1990 and 1980 U.S. Census data is provided.

The report is organized into four sections, and a brief summary of the data is presented at the beginning of each section:

- County Data
- Political Township Data
- Municipality Data
- Chicago Community Area Data

Other Reports:

This report represents one of the first products of the RTA Planning Information System which RTA is developing using TransCAD and other microcomputer software. Additional reports will be prepared as the data becomes available.

RTA staff thanks the Northeastern Illinois Planning Commission for its help. The timely provision of selected data files from the 1990 U.S. Census Summary Tape File 1 and other data as requested has made the production of this report possible.

COUNTY DATA SUMMARY

Overview:

The RTA service area encompasses 3,753 square miles in six northeastern Illinois counties: Cook, DuPage, Kane, Lake, McHenry, and Will (see Figure 1).

Population:

The region's total 1990 population was 7.26 million, an increase of 2.2 percent over the 1980 level. The total number of households in the region was 2.62 million in 1990, a 5.3 percent increase over the 1980 level. The stronger growth in the number of households compared to population is probably explained by the declines that were observed in the region's mean household size and family size during the same period. In 1990, the mean household size and family size for the region were 2.72 and 3.32, respectively, declining from their 1980 levels of 2.80 and 3.41.

Despite a slight decline in population, Cook County experienced a slight increase in the number of households between 1980 and 1990. Cook County continues to be the center of population for the region, accounting for over 70 percent of the region's population and households. Density in Cook County, as measured by persons per square mile, declined slightly since 1980. However, at 5,313 persons per square mile, Cook County still had the highest population density in the six-county area. Cook County exhibits the lowest mean household size of the six counties at 2.67 persons, but the third largest mean family size at 3.33 persons.

The second largest county in the region, in terms of population, is DuPage County, accounting for approximately 10 percent of both the region's population and its households. From 1980 to 1990, population and the number of households in DuPage County increased by almost 19 percent and 26 percent, respectively. Of the six counties, DuPage County had the lowest mean family size at 3.24 persons.

Kane, Lake, McHenry, and Will Counties represent the remaining 20 percent of the region's population and households. Between 1980 and 1990, McHenry County experienced the largest percentage increases in population, 24 percent, and number of households, 28 percent, of the region's six counties. Lake County also experienced substantial percentage increases in population and number of households at 18 percent and 25 percent, respectively. Compared to McHenry and Lake, Kane and Will counties experienced moderate percentage increases in population and number of households in the last decade. Population in Kane County increased by 14 percent, while population in Will County grew by 10 percent.

Looking at the age breakdown of the region's population in 1990, 25.9 percent were under 18 years of age, 62.7 percent were of

working age (defined as age 18 to 64) and 11.3 percent were 65 years or older. Cook County's population can be characterized as slightly older than the rest of the region. Nearly 12.4 percent of Cook County's population is 65 or older, while less than 10 percent of the collar counties' population is 65 or older. DuPage County experienced the highest proportion of working population (ages 18 to 64) with nearly 65 percent of its total population in this age group. Kane and Will Counties had the highest proportions of persons less than 18 years old in the region.

Ethnic composition of the region's population can be characterized as follows: 66 percent White, 19 percent Black, 12 percent Hispanic, and 3 percent Asian. Of the six counties, Cook County had the highest proportion of non-White residents, at just under 43 percent, and the highest proportion of Black residents at 25.5 percent. Kane County had the highest proportion of Hispanic residents, at 13.7 percent, while DuPage County had the highest proportion of Asian residents at 5 percent.

Housing:

The total number of housing units in northeastern Illinois in 1990 was approximately 2.8 million, representing a nearly 6 percent increase over 1980 levels. However, the region's housing vacancy rate also increased from 5.6 percent in 1980 to 6.4 percent in 1990. In 1990, owner-occupied housing units accounted for 61 percent of the total occupied housing units in the region, up slightly from 57.3 percent in 1980. The median value of an owner-occupied housing unit in the region rose from $65,800 in 1980 to $110,700 in 1990.

Cook County's housing units represented more than 72 percent of the region's total housing units in 1990. While Cook County added almost 28,000 units during the decade, it represented only a 1.4 percent increase over the 1980 number of housing units. Cook County experienced the highest proportions of renter-occupied housing units to total housing units at 44.4 percent. Home ownership is more prevalent in the the collar counties as the number of owner-occupied housing units as a percent of total housing units ranged from 69.5 percent in Kane County to 79.9 percent in McHenry County. The rate of vacancy ranged from a low of 3.9 percent in Kane County to 7 percent in Cook County.

At just over $137,100, the DuPage County median owner-occupied housing value was the highest of the six counties in 1990. This was followed closely by Lake County's median owner-occupied housing value at $136,700; the median value of an owner-occupied unit was the lowest in Will County at $89,900.

POLITICAL TOWNSHIP DATA SUMMARY

Overview:

The six counties in the RTA's service area are divided into 115 political townships (see Figure 1). The graphic presentation in this section focuses on the collar county townships since an analysis of City of Chicago community areas is presented in a separate section of this report. Analysis in this section is brief, as more detail can be found in this report in the section entitled "Municipality Data Summary".

Population:

In general, Chicago and its adjacent townships experienced population losses between 1980 and 1990. Although near-in suburban townships experienced population declines during this period, in many of these townships, the number of households actually remained stable or increased. For example, Niles, Maine, Leyden and Worth Townships, all of which lost residents in the 1980s, showed no change or slight increases in the number of households.

For the most part, the remainder of the region's townships comprising the outer suburban areas all experienced growth in their populations and households. Most notable is the growth experienced in townships that form a long arc, just west of the inner suburban townships. Two townships, Naperville and Orland , exhibited very strong growth, both in absolute numbers and percentages.

Beyond this area of strong growth, the townships in the far northern, southern and western parts of the six-county region exhibited moderate growth. Though absolute growth in population and number of households was slight, some townships such as Warren, Plato, and Sugar Grove saw significant percentage increases.

In general, higher mean household and family sizes were more common in outer area townships than they were in the City of Chicago and adjacent suburban townships. Homer, Wheatland and Campton Townships exhibited the highest mean household sizes ranging from 3.45 to 3.39 persons per household.

Berwyn, Norwood Park, Riverside and Niles Townships have the highest proportions of seniors (age 65 or older); over 20 percent of their populations are in this age group. Wheatland and Wayne Townships had some of the highest proportions of children under the age of 5 years, each greater than 10 percent. Florence and Channahon Townships, with over 26 percent, had the highest proportions of persons between the ages of 5 to 17.

Housing:

Naperville, Wheeling and Schaumburg Townships experienced the largest absolute increases in housing units between 1980 and 1990. Both Naperville and Wheatland Townships more than doubled their housing units during this decade. The greatest declines in the number of housing units during the decade was experienced in Joliet and Cicero Townships.

Owner-occupied median housing values were the highest in New Trier and West Deerfield Townships, at $341,000 and $280,000, respectively.

MUNICIPALITY DATA SUMMARY

Overview:

Within the six counties of the RTA's service area, there are 263 municipalities (see Figure 1).

Chicago Population:

With 2.78 million residents in 1990 and 1.03 million households, the City of Chicago represented 38 percent and 39 percent of the region's population and households, respectively. Between 1980 and 1990, the City's population declined by 7.4 percent, representing a loss of 221,000 persons. Similarly, the total number of households in Chicago declined by 6.2 percent, representing a decline of more than 68,000.

The mean household size in 1990 was 2.67 persons, down slightly from the 1980 level, and mean family size remained relatively unchanged at 3.46 persons. Density, as measured by persons per square mile, was almost 12,000 persons, significantly higher than the regional average of approximately 1,900 persons per square mile.

The age breakdown of the City's population in 1990 was: nearly 26 percent under the age of 18; 62 percent of working age (defined as age 18 to 64); and nearly 12 percent 65 or older. Chicago's ethnic composition can be described as follows: 38 percent White, 39 percent Black, 19 percent Hispanic, and 4 percent Asian. A significant portion of the region's non-White ethnic population resides in the City with 76 percent, 54 percent, and 41 percent of the region's Black, Hispanic and Asian populations, respectively, residing within Chicago city limits.

Chicago Housing:

Chicago had 1.13 million housing units in 1990, accounting for 40.5 percent of the region's total housing units, and representing a 3.6 percent decline from the 1980 levels. At 9.5 percent, the City experienced the third highest housing vacancy rate among the region's 263 municipalities. Owner-occupied housing units accounted for 41.5 percent of the total housing units in the City, up slightly from 38.9 percent in 1980. The median value of an owner-occupied unit in the City increased from $47,200 in 1980 to $78,700 in 1990. This $78,700 value represented 71 percent of the region's median value of $110,700 for an owner-occupied unit in 1990.

Suburban Population:

Fifteen of the 262 suburban municipalities had achieved a population of over 50,000 by 1990. These were comprised of the four major satellite cities plus others located in either closer-in areas, or in northwestern Cook and southwestern DuPage Counties. The five largest suburbs, in terms of population, were Aurora, Naperville, Elgin, Joliet and Arlington Heights. In contrast, ninety-one suburban municipalities had a population of less than 5,000, most of

which were located in the outer portions of the region, with a few scattered in southern and southwestern Cook County.

In terms of population growth, Naperville and Carol Stream, in DuPage County, experienced some of the highest population gains in both absolute and relative terms between 1980 and 1990. Nine municipalities in the region doubled their populations between 1980 and 1990. All of these high growth municipalities were located in an arc from central Lake County, through northwestern Cook County and western DuPage County, to southwestern Cook County.

The municipalities experiencing declines in population between 1980 and 1990 consisted primarily of Chicago and its adjacent suburbs. Several municipalities in south suburban Cook County experienced population losses between 1980 and 1990.

The mean household size of almost 63 percent of the municipalities in the region was in the range of 2.5 to 3.0 persons per household. Ford Heights in southern Cook County, South Barrington in northwestern Cook County, and Hainesville in central Lake County had the largest mean household sizes (over 3.5 persons per household). The municipalities adjacent to Chicago tended to exhibit smaller household sizes.

In terms of population density, as measured by persons per square mile, major communities with density levels of more than 11,000 persons per square mile included Elmwood Park, Berwyn, Cicero and Oak Park. Over 50 percent of the municipalities fell into the range of 1,000 to 4,000 persons per square mile.

Suburban Housing: Ten suburban municipalities experienced a doubling of the number of housing units in their communities, with Naperville experiencing the highest absolute increase at 16,843 units. Larger suburban municipalities experiencing significant declines in the number of housing units include Oakbrook Terrace, losing 27 percent of its units, and Rosemont, losing 13 percent of its units. Housing vacancy rates in the suburban municipalities typically ranged from 3 - 5 percent, with some higher and lower exceptions.

The percentage of owner-occupied housing units to total units varied widely. Municipalities situated closer to the City of Chicago typically had rates in the range of 40 - 55 percent owner-occupied, while rural municipalities at the outer reaches of the metropolitan area experienced rates typically in the 80 - 95 percent range.

Higher median housing values for owner-occupied units were found primarily in municipalities located in the northern and northwestern portions of Cook County, in DuPage County, and in southern portion of Lake County. In contrast, the lower median housing values were found primarily in municipalities situated in southern Cook County, portions of western Cook and Will counties, and northeastern Lake County.

CHICAGO COMMUNITY AREA DATA SUMMARY

Overview:

The City of Chicago is divided into 77 community areas (see Figure 1). Community areas are comprised of complete U.S. Census tracts.

Population:

While the City of Chicago's overall population declined by 7.4 percent between 1980 and 1990, some community areas experienced strong growth. Community areas experiencing the largest absolute and percentage increases in population include: the northern community areas of Rogers Park, West Ridge and Lincoln Park; the northwest areas of Belmont-Cragin, Albany Park and Hermosa; South Lawndale in the western part of the City; and the near southwest areas of Gage Park and Chicago Lawn. Community areas experiencing the largest population losses are located primarily on the west and south side of the City.

The mean household size for the City of Chicago was 2.67 persons. The northeast community areas experienced some of the lowest mean household sizes in the City, ranging from 1.51 to 2.26 persons. High mean household sizes, ranging from 3.36 to 4.07 persons, were found in the west side community areas of the Lower West Side, North Lawndale and South Lawndale and scattered throughout other parts of the City.

In terms of persons per square mile, much of the north side of Chicago experienced density levels significantly higher than the citywide average of 11,900. Concentrations of density were also found on the west and the near southwest areas of the City. The northeast community areas of Lakeview, Uptown, Edgewater and Rogers Park, with 20,000 to 31,000 persons per square mile, are some of the densest in the City. In addition to the Grand Boulevard community area, the near southwest community areas of Englewood, West Englewood and Auburn Gresham had the highest density levels of community areas on the south side.

Housing:

Overall, Chicago experienced a 3.5 percent decrease in the number of housing units between 1980 and 1990. Community areas experiencing the largest housing unit gains in absolute terms include many of the northeastern community areas and some of the community areas in the far north,the near west and the south sides of the City. Absolute losses were most notable in the near northwest, the west and the mid-south areas of Chicago.

In terms of housing vacancy rates, the citywide average of 9.5 percent was exceeded in several west side and south side community areas. Numerous community areas in the southwest and northwest portions of Chicago experienced vacancy rates of less than 5

percent, well below the citywide average. The highest vacancy rates, ranging between 20 percent and 40 percent of the housing units were experienced in the community areas of the Near West Side, Oakland, Grand Boulevard, Washington Park and Woodlawn.

Owner-occupants represented 42 percent of the total housing units in the city, with the remaining 58 percent representing rental units. Community areas with high proportions of rental units, exceeding 75 percent of the total occupied units, were concentrated on the south, west and northeast portions of Chicago. In contrast, owner-occupied units in community areas on the far northwest and far southwest areas of Chicago typically represented more than 75 percent of the total housing units in those community areas.

The median value of an owner-occupied housing unit in Chicago was $78,700 in 1990. The highest median housing values were concentrated in north and northeast community areas, in the Loop, in the Near South Side and in the Kenwood/Hyde Park community areas further south. Lower median housing values in the city were generally found on the near northwest side, the far west side and in several south side community areas.
